

Your Solution for Maximum Security

Mer Security Demonstrates New Features with Newest Release of Secure-M PSIM Solution at ASIS 2010 in Dallas, TX

Secure-M Physical Security Information Management Platform release of Revision 8.0 adds exciting features and additional interfaces

Fair Lawn, NJ – October 8, 2010—New Jersey-based [Mer Security](http://www.mersecurity.com), a worldwide leader and innovator of comprehensive, proactive PSIM (Physical Security Information Management) technology will demonstrate the newly released **Secure-M** ver. 8.0 at **Booth 849**, during the [ASIS International 56th Annual Seminar and Exhibits](http://www.asis.org) Conference, October 12-15, 2010, at the Dallas Conference Center, Dallas, Texas.

Included in this new release is its cutting-edge 3D layout command and control system integrated with the proven **Secure-M** PSIM technology.

Mer Security will present **Secure-M** with its new, enhanced features and will demonstrate its capabilities as part of new deployments of the Secure-M platform at customers' sites. **Secure-M** now offers security operators' the ability to visually and audibly track and identify criminal or terrorist security threats, and to respond to these threats and any urgent situations in real time. **Secure-M** also provides an accurate head count and vehicle count for first responders in the event of an emergency or mandatory evacuation.

The new release enhances the existing event management program, by adding the ability to define parameters, as well as pre-define messages for mass distribution, and adds actions and comments to the event management procedure. **Secure-M** allows for full tracking over each and every event's life cycle, for debriefing and analysis.

-MORE--

To this end, Mer Security's *Secure-M* software platform and 3D command and control system integrates disparate surveillance devices, alarms, thermal sensors and CCTV, reporting all of their data feeds to a single dashboard. This gives operators full management capabilities of the facility, with multiple video images and advanced sensors displayed over 3D maps and images. Operators can also distribute alerts via SMS, IM, and email. Operators have the ability to place one event on hold and respond to a more critical event, or manage multiple threats of varied alert levels simultaneously, in real time.

In addition, the new release provides the capability to assign different levels of permissions to diverse users and improves the level of security per the facility requirements.

About Secure-M

Secure-M is our security and surveillance management system that gives a real-time dashboard of a company's equipment and resources. *Secure-M* is a unified platform that monitors and interfaces with diverse security devices, including but not limited to CCTV, access control systems, perimeter security fences, RFID solutions, motion detectors, 3D layout, license plate readers, intrusion detection systems, fire alarms, and much more. *Secure-M* supports interfaces with video analytics and fleet management as well. Companies realize a cost savings with *Secure-M*, as it is device agnostic and is scalable to adding devices in the future.

About Mer Inc.

Based in New Jersey since 2000, Mer is a US company recognized worldwide for our innovation leadership in the security sector, an area where we have vast experience. We are the preferred vendor for high-risk events, such as the Athens 2004 Olympic Games, where we provided security services and our *Secure-M* Physical Security Information Management (PSIM).
